

# 5 Reasons Clients Choose Lumeon

to evolve from traditional care coordination to automated care orchestration

## 1. Strong care process expertise

You know care and Lumeon knows process, so we harness the power of collaboration to take your care delivery models from good to best.

Working with your clinical, IT, administrative, and transformation teams, we document your "as-is" processes, operationalize them to align with your goals, and then make recommendations to streamline care, boost productivity, and reduce costs.

## 2. Enterprise-wide care coordination at scale

Coordinating activities, workflows, decisions, and data across every patient, employee, function, and care setting is daunting.

Lumeon's care automation platform helps you consolidate point solutions over time while being flexible to deploy quickly and integrate with your existing EHR.

The result is superior patient experiences and better coordinated teams performing at their best across the organization.

## 3. Deep HIT integration

The more accessible real-time data is for your care teams, the more relevant the care experience becomes for your patients. That's why Lumeon employs a flexible combination of data standards and connectivity with our proven deployment methodology.

We carefully consider applicable data acquisition while being mindful of your resource constraints, giving us the flexibility to deploy our solutions quickly and reliably, with minimal effort.

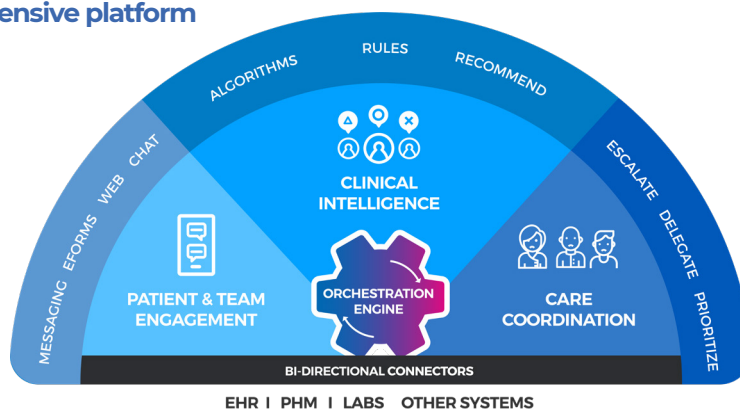

## 4. Flexible, configurable workflows

Lumeon's flexible orchestration engine allows health systems to create a graph-based, dynamic workflow that responds to data changes in real-time.

Our modelling language lets you create a version-controlled blueprint for every pathway, adding rules to automate administration and clinical tasks, attaching SLA timescales to actions, adapting to the needs of every individual, and the specific coverage of their health plan.

## 5. Comprehensive platform

**29%** reduction in no-shows

**60%** increase in staff capacity

**90%** patient adoption

## Clients Embracing Orchestration
